- English - Intermediate
- Ukrainian - Native

Roman Paliokha

UI/UX Designer

As a UI/UX Designer, I focus on designing simple interfaces with high functionality and excellent user experience. I have knowledge and experience with specialized programs and tools for UI/UX design. I do full cycle design: analyse a task, prototype an interface create visual style and implement it all into a usable and simple end product. As a Junior UI/UX designer, I am constantly developing, learning, and looking for opportunities to improve my skills. My skills as a UI/UX designer directly benefit the project or employer by providing high-quality interface design and improved user experience.

Project Experience

The book goes abroad(in progress)

Redesign, full cycle design, team project, commercial project

Website Redesign for Volunteer Organization "The book goes abroad"entails a comprehensive overhaul of the organization's website. The redesign aims to create a more engaging and user-friendly interface, making it easier for visitors to learn about the organization's mission and initiatives. The updated design will showcase success stories, promote volunteering opportunities, and provide a streamlined platform for book donations and international collaborations.

Reservio

Mobile app, full cycle design, team project, study case

The project "Reservio: Seamless Table Reservation without Calls" is an innovative application that simplifies the process of booking tables in restaurants. The app allows users to easily make online reservations and choose specific tables from the venue layout. It also provides the option to preview the menu and receive reminders before the visit. The project aims to enhance the interaction between customers and restaurants, improving their experience and efficiency.

Cleaning web-service

Web-site, full cycle design, team project, study case

The web-based cleaning service provides fast and convenient registration of new employees and customer orders. For workers, we provide a user-friendly interface for adding their profiles and services, as well as the ability to view orders and communicate with customers.For customers, we provide a simple and intuitive interface for ordering services, including the ability to search for workers by various categories. First, we conducted a research on the needs of the target audience and their problems in the process of ordering and receiving services from cleaning companies. Then we developed the concept and functionality of the service, created a visual design and user interface.

Redesing Destin tattoo concept

Web-site, full cycle design, single project, study case

The tattoo parlor's website was redesigned to improve the user experience and make it more modern and attractive to customers. The redesign included updating the visual design, changing the structure of the site, and adding new features that make the site more convenient and useful for visitors.
