Hard skills

- Wireframes
- UI kit
- Adaptive design
- Low and high detail prototypes

Soft skills

- Cooperative
- Critical thinking skills
- Willingness to learn
- Honest

Tools

- Figma
- After effect
- Photoshop
- Illustrator

Language skills

- Ukrainian - Native
- Russian - Native
- English - Intermediate

Education

IT School GoIT

UI/UX Designer (2022-2023)

Kharkiv National University of
Radio Electronics (2010-2014)

Masters degree in Automation and
computer integrated technologies

About me

My specialization is UI/UX design. During my studies, I learned not only to create visually appealing designs but also designs that are user-friendly and easy to understand at first glance. I have all the necessary skills to create a design from the very beginning, including analysis, all the way through to the end.

Project experience

Scan-Pay-Free (mobile app)

The main goal is to reduce the time spent in the store with the "Scan-Pay-Free" app. The design was created with simple elements to ensure that the app works quickly and takes up minimal launch time. After analyzing similar apps, the most important additional functionality was selected.

Hotel restaurant "Mimino" (redesign)

The site redesign started with competitor research to identify potentially good ideas, followed by the creation of low-detailed prototypes. After the prototypes were approved, a start screen was developed based on the colors of the Georgian flag, as the restaurant's cuisine is Georgian. Adapted for screens with 360 and 768 pixels.

Pet finder (web service)

The task is to create a web service interface dedicated to rescuing lost animals in order to simplify and speed up the search process. The web service facilitates communication between those who have lost their pets and those who have found them.

The project will involve the following steps:

- Competitive analysis
- Research of the target audience
- Creation of wireframes
- Development of user personas
- Development of the site map and user flow
- Design of the web service
- Adaptation for tablet and mobile devices

Work experience

Alef.inc

Reprograf (2018-2021)

Making corrections in the design for proper printing on various polymers.
