

# RYMMA SAVCHUK

## FRONT-END DEVELOPER

### About me

As a front-end developer, I have the desire to create innovative and engaging web experiences. My ambition is to build a successful career in software development by continually learning and acquiring new skills. I look for opportunities to work on exciting projects and partner with talented professionals.

- Cultural competence
- Resilience
- Adaptability
- Learning agility
- Emotional agility
- Active listening

### Projects

**Dictionary** 🔗 [github.com](https://github.com) 🌐 [dictionary.com](https://dictionary.com)

- Single page application with React.
- Authentication, data storage, and CRUD functionality implemented with Firebase.
- Client-side routing by React Router.
- Application state with Redux Toolkit, fetching, and updating data.
- Used TypeScript to enhance code scalability, maintainability, and type safety
- CSS modules.

**Notebook store** 🔗 [github.com](https://github.com) 🌐 [notebook.com](https://notebook.com)

- Single page application with React.
- Client-side routing by React Router.
- Application state with Redux Toolkit.
- Used TypeScript for enhancing code scalability, maintainability, and security of types.
- Integrated Axios to handle asynchronous HTTP requests and streamline communication with external APIs.
- Utilized React Pagination to efficiently render large sets of data and optimize page loading times for better performance.
- SCSS modules.

**Bag shop** 🔗 [github.com](https://github.com) 🌐 [bag-shop.com](https://bag-shop.com)

- Single page application with React.
- Client-side routing by React Router.
- Application state with Redux Toolkit.
- Integrated Axios to handle asynchronous HTTP requests and streamline communication with external API.
- CSS modules.
- React Context for efficient state management and seamless sharing of data between components.
