Hard Skill

- PHP
- HTML
- CSS/SASS/SCSS/Stylus
- JS
- Redis
- SQL/MySQL
- OOP
- GIT
- Composer
- Restful API

Development Tools

- VS Code
- Postman
- Virtualbox
- Docker

Soft Skill

- Observation
- Decision making
- Communication
- Multi-tasking

Education Background

- Yuriy Fedkovych Chernivtsi National University
Bachelor's
September 2018 – Presente

About Me

I am a PHP Developer with one year of work experience. My main skills include development using the Laravel framework, working with Restful APIs, refactoring, and maintaining legacy code. Additionally, I am familiar with HTML, CSS, SCSS/SASS, Stylus, and JavaScript (including jQuery). I also have basic knowledge of Linux CLI and experience in configuring NGINX, PHP-FPM, and MySQL. I always keep up with new technologies and strive to grow as a professional. My skills enable me to create efficient and reliable web applications while ensuring high-quality code and meeting project requirements.

Professional Experience

HyperHost | hyperhost.ua
2022 – Present

I worked at HyperHost as a Web Developer, but in fact, I performed the duties of a Full-Stack Developer. During my time at the company, I developed several important applications, including:

- "Character Counter" (<https://hyperhost.ua/tools/en/character-counter>) - an application for counting characters, where I used JQuery to develop the logic.
- "Unshort Link" (<https://hyperhost.ua/tools/en/unshort-link>) - this application is designed to expand shortened links. It checks where they lead and displays the full URLs.
- "SSL Checker" (<https://hyperhost.ua/tools/en/ssl-checker>) - this application allows checking the presence of an SSL certificate on websites.
- "CSR Generator/Decoder" (<https://hyperhost.ua/tools/en/csr-generator>) (<https://hyperhost.ua/tools/en/csr-decoder>) - these applications help generate and decode Certificate Signing Requests (CSRs).
- "HTTPS Status Checker" (<https://hyperhost.ua/tools/en/https-status-checker>) - this application checks server redirection settings. It verifies whether there are redirects from HTTP to HTTPS, from www.example.com to example.com, and others.
- "Web Screen Service" (<https://web-screen.com/>) - this application is built on "google chrome headless" and is used for creating screenshots of websites.

I also have skills in developing modules and themes for WHMCS. Additionally I participated in the development of the "surl.li" project (<https://surl.li/>).
