

# Nataliia Shevchenko

TRAINEE / JUNIOR  
Front-End Developer

---

## About Me

I am an experienced frontend developer with the ability to create attractive and intuitive user interfaces using modern web development technologies. I also have experience as a Team Lead, where I managed a team of developers and oversaw project timelines and deliverables. I have worked in the Scrum methodology and can work collaboratively with others to achieve common goals. My goal is to obtain a job in a reputable company where I can apply my skills and knowledge to deliver good results in the long term.

## Project Experience

### Web Studio

[HTML, CSS, SASS] [GitHub](#)

As a developer, I worked on a website for a web studio located in Kyiv. The website was designed to be responsive and adaptable to any device, starting with a screen width of just 320 pixels. The website featured three main pages, including an information page about the web studio, a portfolio page to showcase previous work, and a contacts page to provide users with a way to get in touch with the studio.

### Food Delivery

[HTML, SAAS, JavaScript, Parcel] [GitHub](#)

I worked on a team project to develop a website for a food delivery service. The website was designed to be responsive and adaptable to any device, starting with a screen width of just 320 pixels. In this project, I was responsible for designing and implementing the Footer section of the website, which included ensuring that it had an adaptive and responsive design and that it was optimized for retina displays. Additionally, I was responsible for creating an application form that allowed users to place orders through the website. As the Scrum Master for the project, I helped to ensure that the development team was following Scrum methodologies and that the project was progressing according to schedule.

### Filmoteka

[HTML, SASS, JavaScript, Parcel, Adaptive/Responsive design, REST API, GIT] [GitHub](#)

I worked on a team project to develop a website for searching films. My responsibilities included loading popular movies onto the main page, implementing a search functionality to allow users to find movies by keyword, implementing pagination on the main page, and creating a user library where users could save their favorite films. In addition, I served as the team lead, managing the project timeline, delegating tasks to team members, and overseeing the project's overall progress.

## Education

IT School GoIT  
Fullstack Developer

2022 - 2023

Donetsk National University  
Faculty of Chemistry

2005 - 2010
