

## HANNA MYKHAILOVA

### UI/UX DESIGNER

#### ABOUT ME

Since childhood, I liked two things: studying people and drawing pictures. And my first education happened to become a degree in sociology and after I worked successfully using my skills.

I finally came to the second already in 2022. That's why I've completed "UI / UX design" courses at Beetroot Academy and aspire to do my best for creating good stuff.

Throughout 2022, I improved my professional skills, studied additional software. I am currently working with a team on a PET project, combining it with freelancing.

Ae

#### SOFT SKILLS

- self-organization
- teamwork
- watchfulness
- leadership qualities
- empathy
- communicative
- persistence
- flexibility

# UI/UX DESIGNER

HANNA MYKHAILOVA

## ABOUT ME

My name is Hanna, I'm 28 years old and "I don't know who I want to be ..." you might think, but things are much more interesting. Each of us at the age of 16 will have to choose a profession that will determine our life in the future. And it happened twice in my life. Since childhood, I liked two things: studying people and creating something beautiful and valuable for myself and my dear people, so I made a design project for my apartment, which we successfully translated into reality, and I am certainly proud of it.

But my first education happened to become a degree in sociology and after I worked successfully using my skills. Having achieved success in this area, I realized that I want to move on.

I finally came to the second already in 2022. That's why I've completed "UI / UX design" courses at Beetroot Academy and aspire to do my best for creating good stuff.

Throughout 2022, I improved my professional skills by studying additional software. I am currently working with a team on a pet-project, combining it with work.

As I said earlier, at the beginning of 2022, I started to study as a UI/UX designer, and already in July 2022, I received a certificate of completion of courses in UI/UX design.

At the same time, while studying web design, I wanted to expand the boundaries of my capabilities and began to study additional materials.

Thanks to the IT Generation program, I was able to further study the theory of color and composition.

Among what I learned on my own are books (Jakob Nielsen - "Web Design"; Michael Filipiuk "UI Design Principles") as well as an additional software.

Having studied the theory, I started to practice - I studied Photoshop, Illustrator, and Dragonbones programs with which I create visual content for web interface design.

At the moment I work through networking and freelance platforms. Working part-time I succeed in expanding my portfolio through the creation of pet-projects.

I successfully completed the AI Basics course from Google and use the acquired skills in the Midjourney neural network in my work on a pet project.

My previous work experience allowed me to acquire empathy and communication skills since my main task was interacting with the company's employees.

I can also describe myself as diligent, attentive to details, and a very thorough worker. In my work, I rely on the importance of details. I can work with concentration both independently and in a team.

I have experience in conducting a full cycle of UX research:

- Conducting competitive analysis;
- Conducting surveys and interviews;
- Constructing information architecture;
- Creating a mood board;
- Describing a User persona;
- Conducting System Tests with A/B testing and other.

I'm also good at creating a user interface, including all stages: sketching; wireframing; creation of design systems; user interface kits; interactive prototypes. I understand and follow the principles of atomic design, the rule of thirds. I follow the rules of color and composition, I know how to work with guidelines (Human Interface Guidelines, Material Design).

I consider myself sufficiently educated and experienced and I'm ready to work in a great team.
