Pet Projects (10)

All my pet projects' code is located in my github account (they are non-commercial)
https://github.com/netfly-v/

Transport CRM — https://transport-crm.vercel.app/

Mini CRM with 4 ways to login/register: standart (by email and pass), by phone number, through Google or Facebook. If logged as admin, you can give roles to users or delete them. Other users have permission to check all users list, check trips or add a new trip.
Technologies used: Javascript, HTML, CSS, React, Typescript, React-Router, Firebase, Firestore, styled-components, Ant.d

Internet store — https://netfly-v.github.io/internet-store/

Biggest SPA project- simple internet store, where you can do authentication, add/delete products from cart, check orders' history for each user, give 1-5 stars reviews for each product, sort them by categories, etc

Technologies used: Javascript, HTML, CSS, React, Typescript, Redux, Redux-Thunk, React-Router, Reselect, Lodash, styled-components

Rest product service — https://netfly-v.github.io/rest-product-service

React SPA where you can do authentication, check products info, read/post reviews, etc
Technologies used: Javascript, HTML, CSS, React, Redux, Redux-Thunk, React-Router, Reselect

Bears club — https://netfly-v.github.io/bears-club

React SPA to show and edit different types of bears, that come from backend
Technologies used: Javascript, HTML, CSS, React, Redux, Redux-Thunk, Reselect, Lodash

Books searcher — https://netfly-v.github.io/books-searcher

React SPA using Google Books API where you can search different books from all Google's database and sort them by different categories/types
Technologies used: Javascript, HTML, CSS, React, Redux, Redux-Thunk, React-Router, Lodash

Fake login app — https://netfly-v.github.io/fake-login-app

React SPA to gain skills in authentication processes combined with showing actual news from top UA resources
Technologies used: Javascript, HTML, CSS, React, Redux, Redux-Thunk, React-Router, Reselect

Currency converter — https://netfly-v.github.io/currency-converter

React SPA for currency conversion, using official Ukraine's National Bank API
Technologies used: Javascript, HTML, CSS, React, Typescript, React-Router, Lodash

Adaptive Photo Page — https://netfly-v.github.io/adaptive-photo-page

React Mini project to gain skills in creating modal windows
Technologies used: Javascript, HTML, CSS, React, Webpack, etc.

Aviasales (Currently backend is not working) — https://netfly-v.github.io/aviasales

React SPA where filters are used to display different combinations of tickets
Technologies used: Javascript, HTML, CSS, React, Webpack, etc.

Todolist — https://netfly-v.github.io/todolist

Simple React App: todolist
Technologies used: Javascript, HTML, CSS, React, Webpack, etc.

Education

2006 – 2011
Received **specialist** degree of Kryvyi Rih Technical University
Faculty of mining engineering
Specialization – **Mining building engineer**

Past job

10 years in electronics trading business, own internet-stores, big experience in negotiations with Chinese partners

Languages

Ukrainian – Native | **Russian** – Native | **English** – Intermediate
