

VIKTORIAA NECHIPORENKO

Junior Front-end developer

Hello, I'm a proactive and motivated young professional with more than year experience in front-end development and layout.

I completed a course on 'Site layout from 0 to 1' layout, then I studied JavaScript language and React framework with a tutor. I've had a lot of practice in Front-end development. I have experience with API, adaptive and cross-browser layout, developing websites on React. Currently I'm working on a new project. I'm constantly evolving and learning new technologies, as well as quickly grasping material. Looking to become part of a friendly and professional team, where I could develop my skills in Front-end technologies to achieve team results.
